

Tranexamic Acid
Serum 5%

Lightening serum for skin
with dark spot

fleurvisage®

A brighter you, the brighter tomorrow

Tranexamic Acid Serum 5%

Join us as we redefine skincare luxury with a serum that goes beyond the surface, offering you a holistic solution for a luminous, confident complexion. Embrace the future of beauty, embrace our Tranexamic Acid Serum – where every drop is a step towards unveiling the brilliance within you. Welcome to a new era of skincare excellence.

This topical serum contains a high concentration of tranexamic acid to help improve the appearance of skin tone. Perfect for those with sensitive, problematic skin. Moreover, it can fade the appearance of dark spots and it makes your skin glow.

Tranexamic Acid Serum 5%

1

Helps reduce the look of dark spots

2

Targets appearance of uneven skin tone & texture

3

Calms & supports the skin barrier

fleurvisage®

Tranexamic acid (TXA) is a synthetic derivate of lysin, an amino acid. Because of its ability to stop irregular melanin production. TXA has lightening and brightening effects on the skin. TXA fades hyperpigmentation of existing dark spots, acne scars and marks and melasma, as well as preventing new discoloration from forming in the future. TXA has anti-plasmin activity and since the activity of plasmin increases in the process of creating spots, tranexamic acid is proposed as a suitable option that can reduce melanin production by inhibiting the activity of plasmin so cause to lighten the skin.

Shake well Before use. Apply an even layer onto face, neck and chest, avoiding the eye area.
